## **Engineering Design Specification**

| Document Number | Project Title                     |
|-----------------|-----------------------------------|
| 0.3             | Glasses for the Visually Impaired |

#### **Revision History**

| Revision Level | Description of Revision  | Person        | Date             |
|----------------|--|---------------|------------------|
| 0.1            | Functional and non-functional specifications for DPR2  | Waleed Ahmed  | July 16, 2021    |
| 0.2            | -Reduced scope of the project based on Bluetooth constraints, can no longer do everything purely offline -Split requirements up into subsections for better organization -Added a few extra software and hardware requirements | Waleed Ahmed  | August 5, 2021   |
| 0.3            | -Got rid of bluetooth requirements -Added color and money detection -Added more explicit server requirements -Added a button to glasses to switch modes -Added verification plan for each specification                        | Martin Ethier | November 3, 2021 |

### **Intended Application:**

The design is intended to perform accurate optical character recognition, color detection, and money classification, and convey the results effectively through audio for the visually impaired user.

## **Requirements Specification:**

#### 1 General

| No. | Characteristic   | Relatio      | Value        | Units             | Verification<br>Method  | Verification<br>Plan   | Comments  |
|-----|--|--------------|--------------|-------------------|-------------------------|--|---|
| 1.1 | The design shall extract, decode, an information from an image to a visuaudio transcription. |              |              | hrough            | Demonstratio<br>n, Test | Pidii  | Primary function.   |
| 1.2 | The design shall be inexpensive for users to purchase.                                       | <            | 200          | USD               | Analysis                | Track costs for each part and add them up.   | Primary constraint.   |
| 1.3 | The design shall be capable of performance recognition (OCR) from an image.                  | orming opt   | ical chara   | cter              | Demonstratio<br>n, Test |  | Functional requirement.   |
| 1.4 | The design shall be capable of perform an image.   | orming cold  | or detection | on                | Demonstratio<br>n, Test |  | Functional requirement.   |
| 1.5 | The design shall be capable of perform an image.   | orming mo    | ney detec    | tion              | Demonstratio<br>n, Test |  | Functional requirement.   |
| 1.6 | The glasses device shall be connecte WiFi.   | ed to the ir | nternet us   | ing               | Demonstratio<br>n       |  | Functional requirement. Internet connection is required to send data to the backend server. |
| 1.7 | The iOS device shall be connected t  | net using    | WiFi.        | Demonstratio<br>n |                         | Functional requirement. Internet connection is required to receive data from the backend server.                                       |   |
| 1.8 | The iOS device needs to be in close all times.   | to the glas  | sses at      | Demonstratio<br>n |                         | Non-functional requirement. Not needed for operation, but the device becomes useless if the user cannot hear the audio from the phone. |   |
| 1.9 | The iOS app needs to be kept active usage.   | ly open du   | iring devic  | ce                | Demonstratio<br>n       |  | Functional requirement. Would not be required if we had an MFI chip.                        |

#### 2.1 Software - General

| No.   | Characteristic  | Relatio | Value | Units           | Verification | Verification                           | Comments                    |  |  |
|-------|---|---------|-------|-----------------|--------------|--|-----------------------------|--|--|
|       |   | n       |       |                 | Method       | Plan                                   |                             |  |  |
| 2.1.1 | 1 The design's user interface (UI) and user experience (UX) |         |       |                 | Demonstratio | Have an                                | Non-functional requirement. |  |  |
|       | shall be optimized for accessibility.                       |         |       | n, Test, Expert | assistive    | VoiceOver, colorblind friendly colors, |                             |  |  |
|       |   |         |       |                 | Opinion      | technology                             | not too many buttons.       |  |  |

|       |  |    |    |   |                | instructor verify UI/UX.                       |                             |
|-------|--|----|----|---|----------------|--|-----------------------------|
| 2.1.2 | The processing server shall have a sufficiently high uptime. | >= | 99 | % | Test, Analysis | Utilize server monitoring tools to track this. | Non-functional requirement. |

#### 2.2 Software - iOS

| No.   | Characteristic                      | Relatio     | Value      | Units  | Verification | Verification | Comments                             |
|-------|-------------------------------------|-------------|------------|--------|--------------|--------------|--------------------------------------|
|       |                                     | n           |            |        | Method       | Plan         |                                      |
| 2.2.1 | The iOS app shall be capable of co  | mmunicati   | ng with th | ne     | Demonstratio |              | Functional requirement.              |
|       | server to receive and post data.    |             |            |        | n, Test      |              |                                      |
| 2.2.2 | The iOS app shall be able to take i | mages and   | send it to | the    | Demonstratio |              | Functional requirement.              |
|       | server for computer vision proces   | sing.       |            |        | n, Test      |              |                                      |
| 2.2.3 | The iOS device shall perform text   | •           | ynthesis o | of any | Demonstratio |              | Functional requirement. Text can     |
|       | text data received from the server  |             |            |        | n, Test      |              | include computer vision results or   |
|       |                                     |             |            |        |              |              | when mode has switched (or any       |
|       |                                     |             |            |        |              |              | other feedback that is useful to the |
|       |                                     |             |            |        |              |              | user).                               |
| 2.2.4 | The user shall be able to switch or | peration me | odes usin  | g the  | Demonstratio |              | Functional requirement.              |
|       | iOS app.                            |             |            |        | n, Test      |              |                                      |

# 2.3 Software - Artificial Intelligence

| No.   | Characteristic  | Relatio | Value | Units | Verification   | Verification   | Comments                    |
|-------|---|---------|-------|-------|----------------|--|-----------------------------|
|       |   | n       |       |       | Method         | Plan   |                             |
| 2.3.1 | The machine text OCR algorithm shall have a Word Error Rate (WER) on a custom test set. | <       | 10    | %     | Test, Analysis | Test set will be collected using the PI and will reflect targeted use cases. | Non-functional requirement. |
| 2.3.2 | The handwriting OCR algorithm shall have a Word Error Rate (WER) on a custom test set.  | <       | 25    | %     | Test, Analysis | Test set will be collected using the PI and will reflect                     | Non-functional requirement. |

|       |   |   |    |   |                | targeted use cases.  |                             |
|-------|---|---|----|---|----------------|--|-----------------------------|
| 2.3.3 | The text-in-the-wild OCR algorithm shall have an F-score on a custom test set.  | > | 60 | % | Test, Analysis | Test set will be collected using the PI and will reflect targeted use cases. | Non-functional requirement. |
| 2.3.4 | The money classification algorithm shall have an accuracy on a custom test set. | > | 80 | % | Test, Analysis | Test set will be collected using the PI and will reflect targeted use cases. | Non-functional requirement. |
| 2.3.5 | The color detection algorithm shall have an accuracy on a custom test set.      | > | 90 | % | Test, Analysis | Test set will be collected using the PI and will reflect targeted use cases. | Non-functional requirement. |
